I have the latest driver (Version 1.4) downloaded from Microsoft's website. The driver installs fine, but the headset still has a yellow icon in device manager.

This headset is a USB headset. Any help is appreciated. I figured it out. It turns out that there are a few files that are necessary in order for USB composite devices to work properly (USB devices with audio and/or video).. inf - usbstor.pnf - usbvideo.inf - usbvideo.pnf. I was missing the first two that are in bold.. I'm not sure why it isn't working on my desktop. Just a little background, I have not used this headset for a few months (maybe years).. To retrieve these files, I simply grabbed them from a fresh Windows 7 installation on a virtual machine.. You can probably grab them from another computer you have in your home too.

microsoft lifechat drivers

microsoft lifechat drivers, microsoft lifechat lx-3000 drivers windows 10, microsoft lifechat lx-4000 drivers, microsoft lifechat lx-6000 drivers, microsoft lifechat headset drivers, microsoft lifechat lx-3000 drivers win 10, microsoft lifechat lx-3000 microphone drivers, microsoft lifechat lx-4000 drivers windows 7

inf - usb.pnf - usbport.inf - usbport.pnf - usbprint.inf - usbprint.pnf - usbstor.. These files need to be located in C:\Windows\inf. The list of files are as follows: - usb.. Just to confirm that the headset actually works, I tested it in a virtual machine running Windows 7 Ultimate and it picked it up right away without me having to install the driver manually.. I'm not sure how or why I was missing them, but I'm just glad it was a simple fix.

microsoft lifechat lx-4000 drivers

I was using a regular 3.5 mm jack headset until it just broke today Jan 9, 2009 - This software and drivers are still in a beta phase but are necessary for your Microsoft input devices to work properly under Windows 7.
